3/4 - 1 5/16 inch

Talon Breaker Bar – 6 inch model

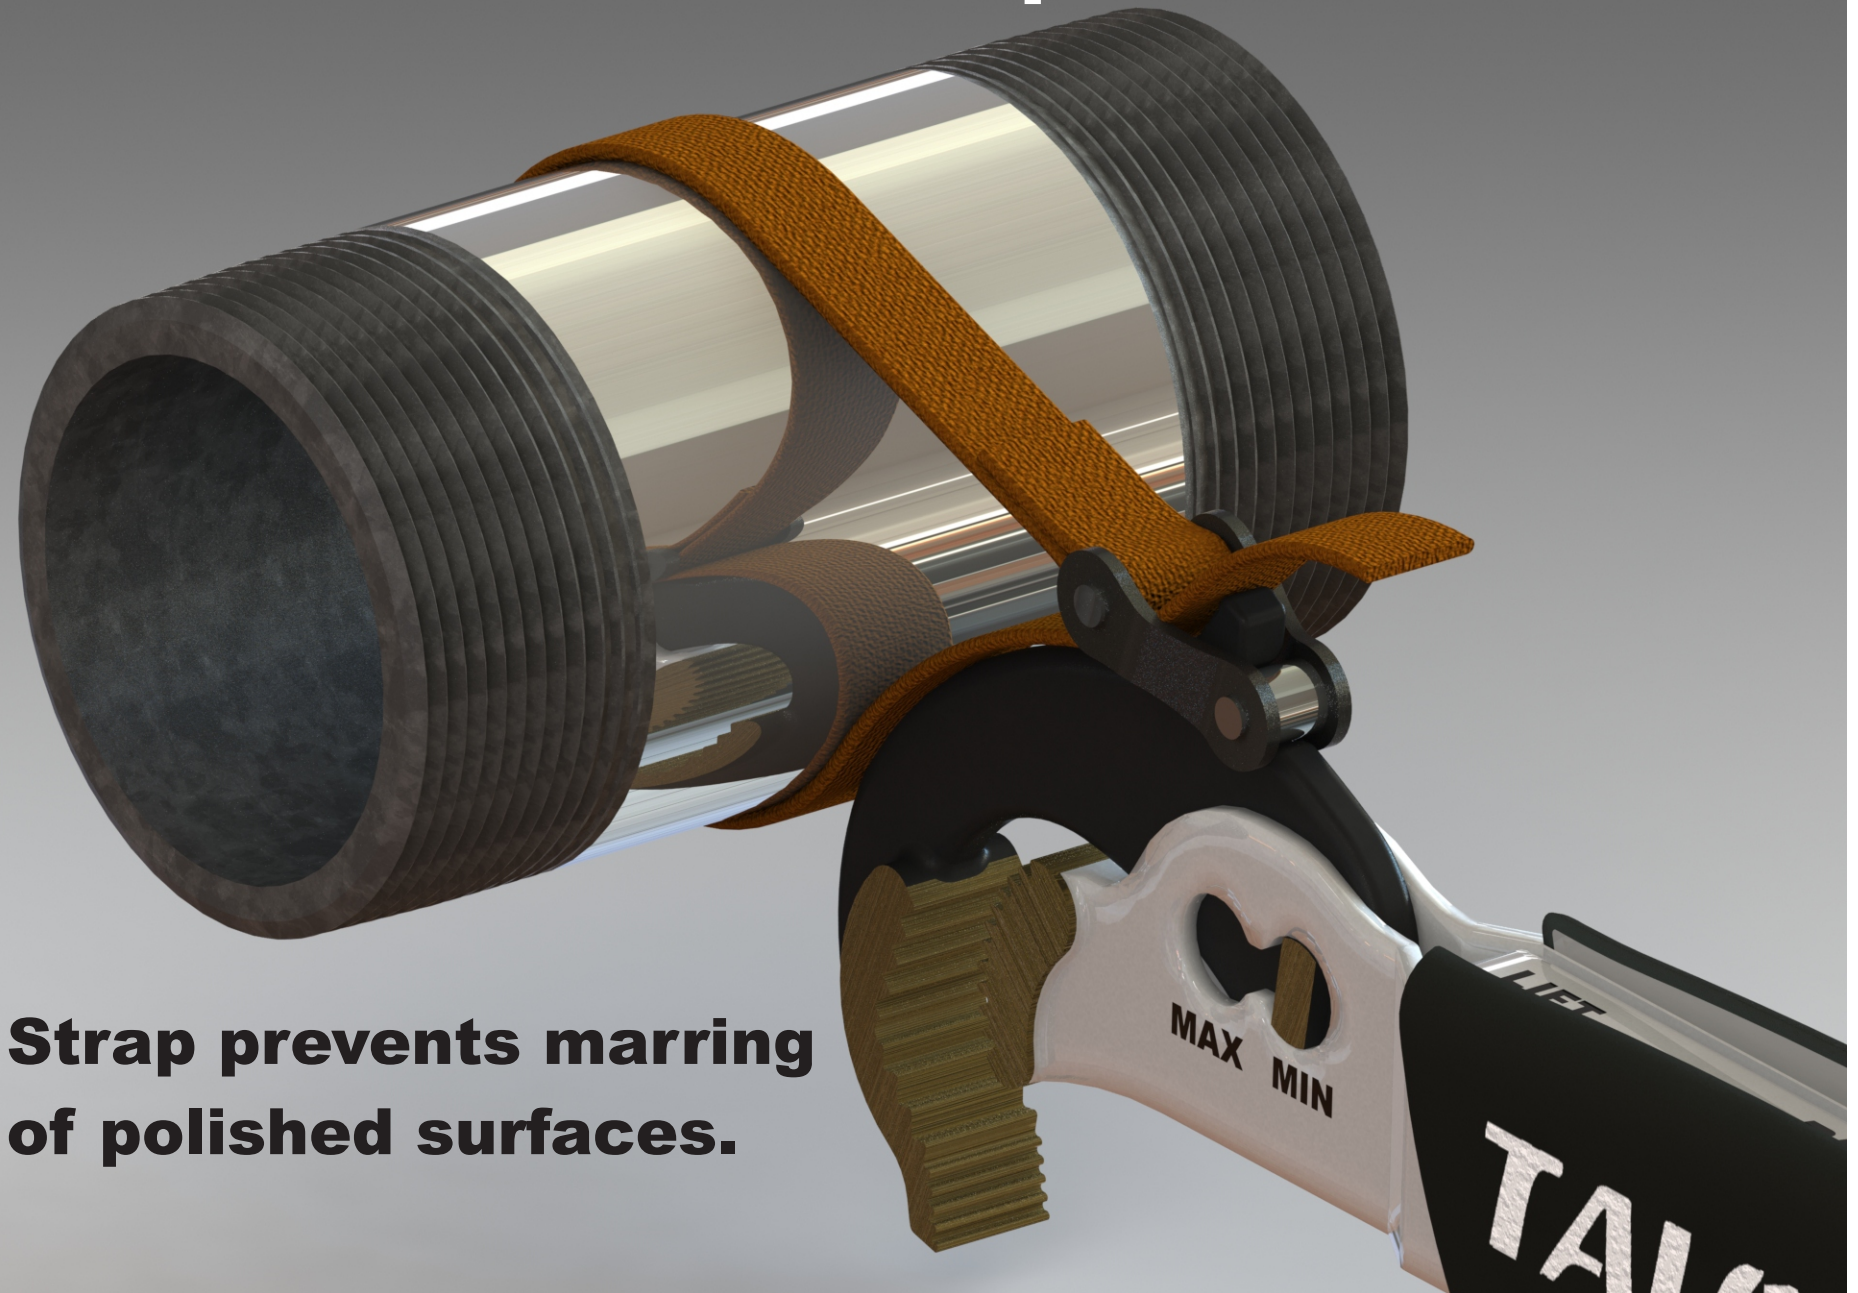

Talon Breaker Bar – 9 inch model

Talon with Strap Wrench

**Strap prevents marring
of polished surfaces.**

Summary

The Talon was developed to meet the demands of the layman as well as the professional. From working on a swing set, to assembling a bicycle, to removing rounded or rusted fasteners, to tightening a fastener or supply line on a lawnmower, the Talon was designed to handle the job.

The unique design of the Talon employs the use of a shorter handle to permit access into tight spaces and a flip-out breaker bar to provide extra leverage on tougher projects.

The two-position jaw enables the Talon to grip an endless array of fasteners such as hex and square head, external Torx®, wing nuts, eyebolts and hooks, as well as copper fittings and round objects like black and galvanized pipe. The spring-loaded jaw allows the Talon to ratchet, turning your work-piece quicker and with less effort. The quick-attach polymer strap keeps finished surfaces such as shower-heads, kitchen faucets, and chrome drains safe from scratches.

The Talon is a “must have” tool that belongs in every tool box, gear bag, glove box, and kitchen drawer.
